Environmental Policy

Krylbo Verkstäder manufactures advanced welded and machined structures on a subcontracting basis for national and international industries. We conduct our operations with responsibility for the environment, the climate, and long-term sustainable development.

We shall:

- comply with applicable laws and other binding requirements relevant to our operations, and work to minimize our significant environmental aspects
- pursue continuous improvement and prevent pollution
- reduce our environmental and climate impact through the efficient use of energy, materials, and natural resources
- promote circular solutions through reuse, recycling, and life extension wherever possible
- use our materiality assessment as the basis for prioritizing sustainability initiatives
- encourage engagement among our employees and customers, and place relevant sustainability requirements on suppliers and business partners

Our environmental and sustainability performance is monitored through objectives and key performance indicators within our certified management system, as well as through annual sustainability reporting in accordance with the VSME standard.

Krylbo
